

1. (Cancelled)
2. (Cancelled)
3. (Cancelled)
4. (Previously presented) The apparatus of claim 6 further including a pressure regulator, the pressure regulator oriented in the circuit between the fluid changer and the dispensing device.
5. (Previously presented) The apparatus of claim 6 wherein each section comprises a separate module, the modules being selectively removably connectable together in a desired number to permit the selection of any of a desired number of fluids in the fluid changer.
6. (Previously presented) A fluid changer including multiple sections, each section including a first passageway and two second passageways, each section further including two valves coupled to that section's first passageway, each valve permitting the fluid that flows through that section's first passageway to be provided to a respective one of that section's second passageways upon actuation of that respective valve, and out of the fluid changer, the first passageway adapted to permit the passage of a pig through the first passageway.
7. (Original) The apparatus of claim 6 further including two circuits for supplying the fluids transported through the two second passageways to two fluid dispensing devices, each valve providing the fluid that flows through its respective one of its respective section's second passageways upon actuation of that respective valve, and out of the fluid changer to a respective one of the circuits and to a respective dispensing device.
8. (Original) The apparatus of claim 7 further including a pressure regulator oriented in each circuit between the fluid changer and that circuit's respective dispensing device.
9. (Original) The apparatus of claim 6 further including valve means for switching between supplying the fluids transported through the two second passageways to the fluid dispensing device, the valve means providing the fluid that flows through a selected one of the second passageways to the dispensing device.
10. (Original) The apparatus of claim 9 further including a pressure regulator oriented in the circuit between the valve means and the dispensing device.
11. (Previously presented) The apparatus of claim 6 wherein the fluid changer includes a coating material color changer for selecting among a number of colors of coating material to be supplied to an output port of the color changer.

12. (Cancelled)

13. (Currently amended) [The apparatus of claim 12 further including two second passageways, each section further including two valves coupled to that section's first passageway, each valve permitting the fluid that flows through that section's first passageway to be provided to a respective one of that section's second passageways upon actuation of that respective valve, and out of the fluid changer] A fluid changer including multiple sections, each section including a first passageway and two second passageways, two valves coupled to the first passageway, each of the two valves permitting the fluid that flows through the first passageway to be provided to a respective one of the second passageways upon actuation of the respective one of the two valves, and out of the fluid changer, the first passageway adapted to permit the passage of a pig through the first passageway, each section comprising a separate module, the modules being selectively removably connectable together in a desired number to permit the selection of any of a desired number of fluids in the fluid changer.

14. (Currently amended) The apparatus of claim ~~12~~ 13 further including two circuits for supplying the fluids transported through the two second passageways to two fluid dispensing devices, each valve providing the fluid that flows through its respective one of its respective section's second passageways upon actuation of that respective valve, and out of the fluid changer to a respective one of the circuits and to a respective dispensing device.

15. (Previously presented) The apparatus of claim 14 further including a pressure regulator oriented in each circuit between the fluid changer and that circuit's respective dispensing device.

16. (Currently amended) The apparatus of claim ~~12~~ 13 further including valve means for switching between supplying the fluids transported through the two second passageways to the fluid dispensing device, the valve means providing the fluid that flows through a selected one of the second passageways to the dispensing device.

17. (Previously presented) The apparatus of claim 16 further including a pressure regulator oriented in the circuit between the valve means and the dispensing device.

18. (Currently amended) The apparatus of claim ~~12~~ 13 wherein the fluid changer includes a coating material color changer for selecting among a number of colors of coating material to be supplied to an output port of the color changer.
